

Ray Vinter - Great Britain, London. Businessman, head of the international fund Kegelvill. This fund is accredited in leading banks of the Big Twenty (in Russia by VTB). After studying of responses about the motor Shkondin's wheel and own testing in laboratory of the Cambridge university, undertook creation of global introduction of this development in Europe together with lord Sansberi (aurally) which was the minister of innovations of Great Britain. In the Royal Garden three of them are Shkondin, the lord and Ray, transferred one copy for demonstration to the representative of India (whom he was it was not succeeded to find out). In particular VTB and according to Vinter a number of large international banks were ready to give an irrevocable tranche on introduction of this development. Business did not go because Vinter saw creation of the head company - the patent holder in Great Britain, invited Shkondin, his family and the staff of his laboratory to live and work in England. Shkondin refused. Further, crisis of relationship of Europe with Russia began and banks did not begin to invest money in the Russian development in the Russian Federation. However, Barclay Bank, allocated an irrevocable tranche in the ministry of innovations of England, to lord Sansberi. On this money the company of Ultramotorskompani who made changes to a design the motor of a wheel of Shkondin was created and patented development for itself. As changes were unsuccessful, the company was ruined and went out of business. It concerns to lord Sansberi. Ray Vinter, did not take part in it. Lord Sansberi is at present the rector of the Cambridge university. According to Shkondin. Ray Vinter, is ready to characterize positively Shkondin's development and to attract money, on a condition that it will be the European company. Ray Vinter's sites are unknown. I offer that it is related to intelligence services as information on gave reluctantly. But thus has access to monetary resources and has big relational assets. It everything that it was succeeded to find out.
